The BoatHouse™
BY SWIMLINE

SET-UP INSTRUCTIONS

①

Inflate Boathouse "framework". This is the red vinyl with yellow base. Find large green "roof" panel and inflate. Connect roof to framework with black plastic "j-hooks" already attached to their respective vinyl pieces.
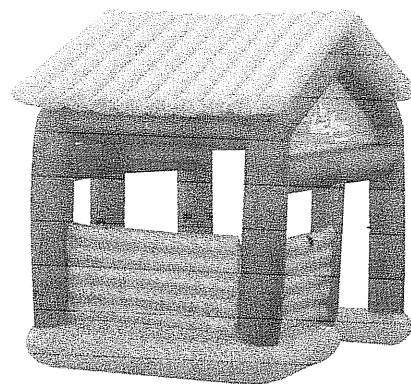

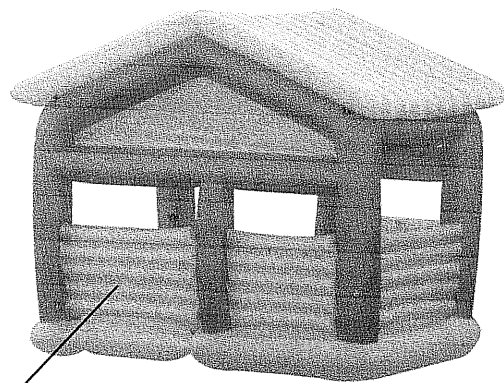

②

Connector Faces Out

Inflate Boathouse "fencing". These are the ribbed green rectangular pieces. There are 3 different sizes of "fencing". The smallest size is shown here and installed on the front of the Boathouse. It has a centrally located black connector that should face out. (see photo) There is a similar piece that is installed in the corresponding position, directly opposite, on the back of the Boathouse. Again, use "j-hooks" to install.

③

Working your way around, install side "fencing". These are the longest pieces of "fencing". As before, you will find a similar corresponding piece for the opposite side. One piece has a central connector that should face out.
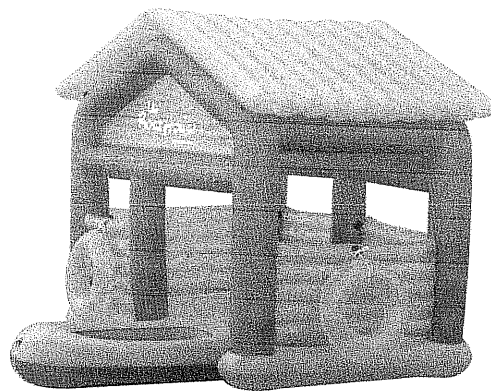

④

Uniquely Sized Fence Piece

Install the back "fence" piece. This is the only "fence" piece that is unique in size. It is slightly smaller than the side panels and slightly larger than the two smaller front and back pieces.

⑤

Complete set-up by inflating rings and boat. Tie rings to black central connectors on fencing.

PARENTS CAUTION: NEVER LEAVE KIDS UNSUPERVISED WHILE PLAYING IN OR AROUND WATER! A COMPETENT ADULT SWIMMER SHOULD BE PRESENT AND WATCHING!
