# Pleatco Pure™

Premium Pool & Spa Filter Cartridges

Quality matters. Choose wisely.™

## MEDIA

The MEDIA serves as the filtration surface. At Pleatco, we only use REEMAY media, the highest quality spun bonded polyester material for all of our filter cartridges.

**White:** High grade, cost effective spun bonded polyester.

**Blue:** High grade, cost effective spun bonded polyester with REEMAY MICROBAN antimicrobial technology.

## PLEATS

The number of PLEATS and the total amount of media used in a filter cartridge impacts the quality and performance of the filtration. The amount of media in a Pleatco Filter Cartridge meets, or in many cases, exceeds the original equipment specifications providing quality performance and extends the life of the product.

**PLEATCO**  
End caps carry the  
**Pleatco Part**  
**Number**  
for easy identification

### END CAPS

The END CAP helps to provide structural support and increase filter cartridge durability. Unlike any other filter cartridges manufactured for the pool & spa marketplace, Pleatco Filter Cartridges have end caps that are 100% Antimicrobial. This enables Pleatco Filter Cartridges to be more effective in prohibiting the growth of mold, and reducing mildew and odor causing bacteria.

You may find different color Pleatco end caps (blue & orange) which help differentiate OEM specified products. Unlike most competitors the Pleatco PART NUMBER is boldly molded into the end cap for quick and easy identification.

### BAND

The BAND keeps the pleats separated helping water to easily flow through the filter. Pleatco's bands are the strongest in the market and ensure that the pleats are separated even under great stress.

### PLEATCO ADAPTORS

Unique design allows for easy cartridge installation and replacement.

### PLEATCO FREE FLOW CORE

Unique Core Design

### CORES

Pleatco FREE FLOW CORES provide longitudinal support and allow for the free flow of water through the MEDIA increasing the effectiveness of the filtration.

FREE FLOW CORES are superior as they are designed to significantly enhance the filtration process over any other competitive product. Pleatco's cores are 'engineered' as opposed to all other cartridge manufacturers who simply use PVC pipe with holes drilled in them. Pleatco FREE FLOW CORES deliver better water flow rates, giving enhanced filtration and reducing wear and tear on the pump and therefore, also uses less energy.

**PLEATCO FREE FLOW CORE**  
Maximum Filtration  
= Cleaner Water

**OTHER COMPETITORS PVC DRILLED CORE**  
Reduced Flow  
= Less Filtration

### ADAPTOR

Pleatco's unique adaptor design makes installation and replacement of filter cartridges easy for the end user. Many filters require a threaded extension at the base of the cartridge to screw into the filter housing. Because the end cap material can become soft, the thread can easily strip or crack if the cartridge is pulled when being removed. Pleatco's Adaptors (PAD) are manufactured using a harder material than the end cap which eliminates the problem.

Once installed, the adaptor can be re-used at the time the filter cartridge has to be cleaned or replaced, and reinstallation is far quicker and easier due to the modular design of the adaptor. With a half turn of the filter element, it is easy to remove it from the spa without the fear of cracking the end cap.

Because the Pleatco Adaptor remains in the filter housing, once the cartridge has been disengaged and removed, there is a far lesser instance where dirt and objects may fall into the exposed opening, and damage the pump.

# Pleatco Pure™

Premium Pool & Spa Filter Cartridges

## Why Pleatco... Here are the key reasons.

- **Over 500 different cartridges in stock**
- **Pleatco FREE FLOW CORES** : Increased efficiency and the best filtration
- **Fastest shipping in the industry with “no minimum” order quantities**
- **35 years of superb products, quick service & steadfast support**
- **The most durable, precision built cartridges in the industry**
- **Top quality filter media (Reemay)**
- **Anti-microbial crack resistant End Caps - The highest resistance to chlorine in the industry**
- **In a rush? We'll drop ship to your customers if needed**
- **Model numbers printed 'right on' the end caps...easy re-ordering. Less stress for you and your customers!**
- **Made in the USA**

**The highest quality filter cartridges in the industry.**

# Pleatco Pure™

Premium Pool & Spa Filter Cartridges

## Let's CUT to the chase.

### Pleatco Free Flow Cores = Cleaner Water.

Nobody talks about cores. Why? Because all of our competitors use PVC pipe with holes drilled in them. Take a few seconds and look inside any of our competitor's cartridges and then look inside ours... you'll see the difference immediately. It's that simple. Pleatco's cores allow for the even flow of water through the entire cartridge which increases filtration, uses all the media, and makes it easier for the pump to pull more water through the cartridge. In the final analysis, Pleatco's Free Flow Cores are designed to be Cores!

**Alert your pool or spa.**  
**Pleatco FREE FLOW CORES are simply better.**

# PleatcoPure.

Premium Pool & Spa Filter Cartridges

**Quality matters. Choose wisely.**

## Antimicrobial Protection.

### Water filtration is more than meets the eye!

The water in your pool or spa is only as clean as the filter you use. The latest Pleatco Filter Cartridges are built with revolutionary new Reemay Filtration Media which combines 100% polyester synthetic fibers with Microban antimicrobial technology which filters out contaminants and inhibit the growth of bacteria - making sure your water is always perfectly clear, clean & pure.

Pleatco uses Microban® antimicrobial product protection to protect the filter cartridge from being a nest for bacteria, mold and algae that can cause odors and product deterioration. Pleatco Filter Cartridges are the ONLY product to harness this technology in both the MEDIA and the END CAP.

Microban® antimicrobial protection is built into products during manufacturing to provide continuous antimicrobial product protection. Microban protection can be found in hundreds of consumer, industrial and medical products around the world.

Microbes or micro-organisms are living cells that are too small to be seen with the naked eye. Microbes such as bacteria, mould and mildew can double every 20 minutes. In some cases, algae can damage product surfaces such as your swimming pool filter. Microban penetrates the cell wall of these micro-organisms making them unable to function, grow and re-produce.

Microban protection works continuously... for the lifetime of your Pleatco Premium Filter Cartridge.

Made with genuine  
**REEMAY®**

# Microban Antimicrobial Protection.

## Take a moment to think about it.

- **Latest Technology - Enhanced Performance**
- **Inhibits the growth of bacteria, mold & algae**
- **Microban protection works continually for the life of the cartridge**
- **Any Pleatco Filter Cartridge can be built using Microban Technology**

### Microban: Antimicrobial FAQ's

#### 1. What is Microban® antimicrobial product protection?

Microban® technology is built-in antimicrobial protection for solid products, coatings and fibers. Microban antimicrobial protection gives products an added level of protection against damaging microbes such as, bacteria, mold and mildew that can cause stains, odors and product deterioration.

#### 2. How do products with Microban® antimicrobial protection work?

Microban® protection is built-in to the product during the manufacturing process. When microbes come in contact with the product surface, Microban protection penetrates the cell wall of the microorganism and disrupts cell functions disabling the microorganism's ability to function, grow and reproduce.

#### 3. What benefit do my customers get from products with Microban® antimicrobial protection?

Microban protection continuously fights the growth of damaging microbes such as, bacteria, mold and mildew that can cause stains, odors and product degradation. Microban protection makes products easier to clean and keeps them cleaner and fresher between cleanings.

#### 4. What types of microorganisms does Microban® protection work against?

Microban® antimicrobial protection is effective against most common bacteria, yeasts, molds and fungi that cause stains, odors and product degradation. Microban technology is not designed to protect users from disease causing microorganisms.

#### 5. How do I know that Microban® antimicrobial product protection is safe?

Microban® technology has undergone extensive independent laboratory testing and has a long history of safe use. It is registered with the EPA for all applications in which it is used. Microban additives can be found in the products of leading consumer, industrial and medical products manufacturers around the world.

#### 6. Does Microban® protection begin working immediately?

Microban® protection begins to work as soon as the microorganism comes into contact with the product surface. It then works continuously to maintain a consistently lower bio-burden than would be expected on a product without Microban® antimicrobial protection. Under the right conditions, microbes on an untreated surface can double every 20 minutes! Microban protection is not a disinfectant, normal cleaning practices should be maintained.

#### 7. How long does Microban® antimicrobial protection work?

Microban® protection is built-in during the manufacturing process and will not wash off or wear away. Microban protection is engineered to provide continuous antimicrobial product protection for the useful lifetime of the product.

#### 8. Has anyone ever gotten sick from using products with Microban® antimicrobial protection?

Extensive testing and a long use history have shown Microban® product protection to be safe. While it is impossible to say that no one will ever experience an allergic reaction to anything, it is highly unlikely a negative experience would be observed. Microban additives are used in very low levels measured in parts per million.

#### 9. Does the use of antimicrobials cause resistant strains of microorganisms?

No. After more than 30 years of use in numerous consumer, industrial and medical applications around the world, there has been no evidence of resistant strain development.

## REEMAY®

· Reemay Liberty with Microban is constructed from 100% polyester tri-lobal fibers that provide the same strength, durability and reliability of standard Reemay.

· Reemay Liberty with Microban provides the same efficiency, loading and pressure drop performance of standard Reemay.

· The fibers in Reemay Liberty are bicomponent construction (combination of two different polymers) with the outer layer of every fiber containing Microban. The Microban is incorporated directly into the outer sheath of every fiber during manufacturing which provides for greater lifespan.

· Reemay Liberty with Microban is easier to clean than standard Reemay due to two reasons. One is surface properties of the material. Our static friction tests (a proxy for "slickness") shows values much closer to the old Liberty than standard Reemay. This should provide much easier release of contaminants during cleaning. Secondly, since Microban will retard the growth of a bio-film, this should also make the cartridge easier to clean.

· The Microban sheath helps prevent, inhibit, retard the growth of bacteria on the filtration media. This helps prevent odor and staining and makes the cartridge easier to clean.

## ANSWERS to FREQUENTLY ASKED QUESTIONS.

### What are the different types of filtration for a Pool or Spa?

There is a lot of confusion about various filters, and many different opinions. Here are a few facts to consider: The first is that a pool can be properly maintained with any of the filter systems available: Filter Cartridge, Sand or Diatomaceous Earth Swimming Pool Filter Systems. Here is a brief description of each type:

#### • Filter Cartridge

##### The economic low maintenance filter.

This one is easy to understand. Water passes through a filter material and the filter captures the debris. This is just like the water filters used under your sink. Cartridges have much more available area to filter than sand. Most start at 50 Sq.ft and the majority of the cartridge filters sold are larger than 100 Sq.ft. Cartridge Filters are designed to run at lower pressure than sand. This puts less back-pressure on the pump and hence you get more flow and turnover for an equivalent pump size. Generally these filters have to be cleaned once or twice a season by simply hosing them off, so you don't touch them as often. In terms of particle size filtered out, cartridge is somewhere between sand and DE.

#### • Sand

##### The older style filter

Water is pushed through a bed of filter sand and removed through a set of lateral tubes at the bottom. The filter area of a sand filter is equal to the area of the filter itself. For example, a 24" filter will have 3.14 sqft of filter area. Only the top 1" of sand is actually used to filter the water. The principle behind this filter is that water is pushed through the filter sand, somewhat like an espresso machine. Dirty water goes in the top and clean water exits out the bottom.

As the filter sand becomes plugged with debris from the pool, the pressure increases on the filter and the water flow drops. In order to clean the filter, you just run it in reverse and dump the waste water; this is referred to as "back washing" the filter. Once the filter is back washed, you move to the rinse mode and that repacks the sand and then back to filter. This has to be done manually every few weeks. From a hydraulics standpoint, a backwash valve is typically the most inefficient piece of equipment you can add to a swimming pool system. Should the sand ever become really dirty, it is easily and inexpensively replaced. In terms of particle size filtered out, sand is the least effective method – it can allow smaller particles to pass back into the pool.

#### • DE

##### Low-usage alternative

Diatomaceous earth is mined and is the fossilized exoskeletons of tiny diatoms. They are used to coat "grids" in the filter housing and act as tiny sieves to remove debris. They are very small and as such can filter out particles as small as 5 microns. Diatom filter area are sized between sand and cartridge – around 60-70 sq ft are most common. Once the filter pressure rises, the filter is back washed just like a sand filter and then "recharged" with more DE powder. Typically it is poured in a slurry into the skimmer and it then coats the filter grids. DE filters run at higher pressures than cartridge filters and as such can lead to some inefficiency and flow loss.

NOTE\* Pleatco does not recommend the use of diatomaceous earth (DE) with cartridge filters. DE Particles will become trapped in the body of the media and shorten cartridge life.

(Resource: Ray Cronise: about.com)

### How can I tell when a Filter Cartridge needs to be replaced?

With no moving parts or electrical switches to fail, Filters Cartridges do not have a defined end-of-life. Instead media will gradually plug up over time.

In a typical spa, the culprit that plugs the media is perspiration and body oils combined with soaps, chemicals and very fine particulate. In a swimming pool, the loading is primarily debris along with suntan lotions and organic matter such as algae.

Assuming the Filter is properly maintained and correctly sized to the pump, determining when the Filter Cartridge is exhausted depends primarily upon three factors:

- 1) Shorter cycle time between cleanings,
- 2) Low water flow rate and high differential pressure,
- 3) Catastrophic failure such as a tear in the media or center core collapse.

All three are dependent upon proper pool or spa water chemistry and following a routine maintenance schedule. Filter elements are plastic and should be handled and maintained accordingly.

### How do I maximize the life of a filter cartridge?

- Clean the elements per manufacturers cleaning instructions
- Never use a stiff brush to clean the media
- Maintain your pool or spa water chemistry in proper balance
- Alternate two sets of filter cartridges when cleaning

For swimming pools, clean the cartridge when filter canister pressure reaches 8 PSI above the initial system or new cartridge starting pressure. For spas, establish a routine cartridge cleaning schedule based on the amount of spa usage. If Baquacil is used as a sanitizer, the filter element must be cleaned with Baqua Clean before any cartridge cleaner is used.

### What is the procedure to clean my filter cartridge?

- 1) Remove the cartridge from the filter housing following the manufacturer's instructions
- 2) Use a garden hose with a straight flow nozzle to wash down the filter element. Work from the top down, holding the nozzle at a 45 degree angle, and wash all the pleats with emphasis between the pleats.
- 3) Rinse until all dirt and debris is gone
- 4) For all spa cartridges and elements used in swimming pools where perspiration, suntan lotions, and other oils are present, soak the element for at least one hour (overnight is most effective) in:

- (A) a commercial filter cleaner, or;
- (B) one cup tri sodium phosphate (TSP) to five gallons of water
- (C) one cup dishwasher detergent to five gallons of water.

- 5) Rinse the cartridge again to remove oils and cleaning solution.
- 6) If the filter has a coating of algae, calcium carbonate (residue from calcium hypo chlorite), iron, or other minerals, soak the cartridge in a solution of one part muriatic acid to twenty parts water until all bubbling stops.
- 7) Rinse the filter cartridge clean and reassemble housing.

### Filter cleaning instructions for chlorine users.

The life of your Pleatco Replacement Filter Cartridge depends upon you the consumer. Our heavy duty Polyester filter cartridge elements will show maximum longevity with proper care and maintenance. Here are some helpful hints to help you get the most out of our product.

The best indications of a "soiled" filter cartridge in need of a cleaning are an increase in pressure within the cartridge's housing canister or a visible decrease in the system's water flow rate. Generally an increase in pressure of 8 pounds per square inch (PSI) or greater above the filter's normal operating pressure (as prescribed in the manufacturer's owners manual) indicates the need to clean the cartridge.

The filter cartridge can be cleansed of coarse dirt and debris by pressure washing inside and out with a garden hose. Fine particles of dirt are more easily removed from the filter pleats when the cartridge is dry. Therefore after hosing the cartridge, allow the filter to dry and either CAREFULLY BUSH, but do not – scrub the pleated surface areas; or apply a stream of compressed air to the filter's outer surface to remove fine particles.

Algae, suntan oil, and body oils can form a coating on the filter pleats which may not be thoroughly removed by hosing. Such a film of algae and/or oils will rapidly clog up the filter's pores thereby greatly reducing filtration. Therefore it is imperative to remove such materials from the filter element as soon as possible. We recommend soaking the cartridge in a solution of commercially available filter element cleaner to remove algae and /or oils from the filter media. Follow the manufacturers' directions for the proper use of such (surfactant, soap) – cleaning solutions. Allow one hour for soaking and then hose the cartridge thoroughly before re-installing in the filter. If clogging persists due to either algae or oils readjustment of water chemistry is necessary to combat the problem.

Excessive calcium or mineral deposits on the filter media can be removed by treatment with a muriatic acid soaking solution. Use commercially available 20% muriatic acid and add to water in a 1 to 1 ratio to make a 10% muriatic acid solution.

CAUTION: Make sure to use a plastic container and take extreme care when handling acid solutions as they can be harmful to eyes, skin and clothing. After cleaning the cartridge, flush the filter element with water and remember to dispose of the acid solution properly.

**A spare "stand-by" filter cartridge is an excellent investment. It provides convenience and a well maintained clean cartridge assures you that your filter will always be ready to operate at peak efficiency.**

# **Pleatco** Pure.™

Premium Pool & Spa Filter Cartridges

## **Products by Measurement**

## How to measure your filter cartridge.

- A.** Measure the outside diameter of the cartridge. (+/- 1/16 inches or +/- 1.6 mm)
  - B.** Measure the overall length of the cartridge (+/- 1/16 inches or +/- 1.6 mm) including the end caps.  
**Do not include any handles, strings, etc.**
- A more accurate measurement is made by measuring through the center of the cartridge when possible.
- C.** If the top and/or bottom is open, measure the inside diameter of the opening (+/- 1/16 inches or +/- 1.6 mm).  
Match the cartridge end cap configuration to a corresponding one in the complete end cap gallery.
  - D.** Make note of the manufacturer (OEM) and model number of the filter the replacement cartridge will be installed in.
  - E.** Take note whether or not there is a center core in center. Also count the number of pleats (+/- 1/16 inches or +/- 1.6 mm)

**Please Note: Filter Cartridge Measurements may vary.  
Always allow a variance of :  
(+/- 1/16 inches or +/- 1.6 mm)**
